

FOR IMMEDIATE RELEASE

STANFORD, CA – Mar 10, 2009 – Inedible Software, LLC announced today the launch of their newest iPhone application, Shotgun Pro. Shotgun Pro uses the iPhone's built-in accelerometer to replicate the cocking and firing of a shotgun. It is currently the only shotgun application sophisticated enough to recognize each of the distinct motions required to load a pump-action shotgun. Shotgun Pro extends the extremely popular Shotgun Free (currently #2 application on the iTunes App Store) to include five different shotgun models. Shotgun Pro costs \$0.99 and is available for all iPhone and iPod touch models.

ABOUT INEDIBLE SOFTWARE, LLC – Inedible Software was founded by Stanford University seniors James Anthony and Edward Marks. James is a Physics major from New York, NY, and Eddie is an Economics and Mathematics double major from St. Louis, MO. They began developing iPhone applications after taking Stanford CS193P: iPhone Development, the first ever university iPhone class, offered last fall and taught by two Apple employees. Their second application, Shotgun Free, has gotten nearly a half-million downloads in its first week on the store.
